

Mexico Aeromagnetic Data

GETECH with the full authorisation of SGM are now marketing the high resolution aeromagnetic data (at 200m grid cell size) for all of onshore Mexico. The 200m grid of total magnetic intensity (TMI) has been derived from 137 separate surveys. The majority of surveys were flown with 1km line spacing. No flight line locations are available.

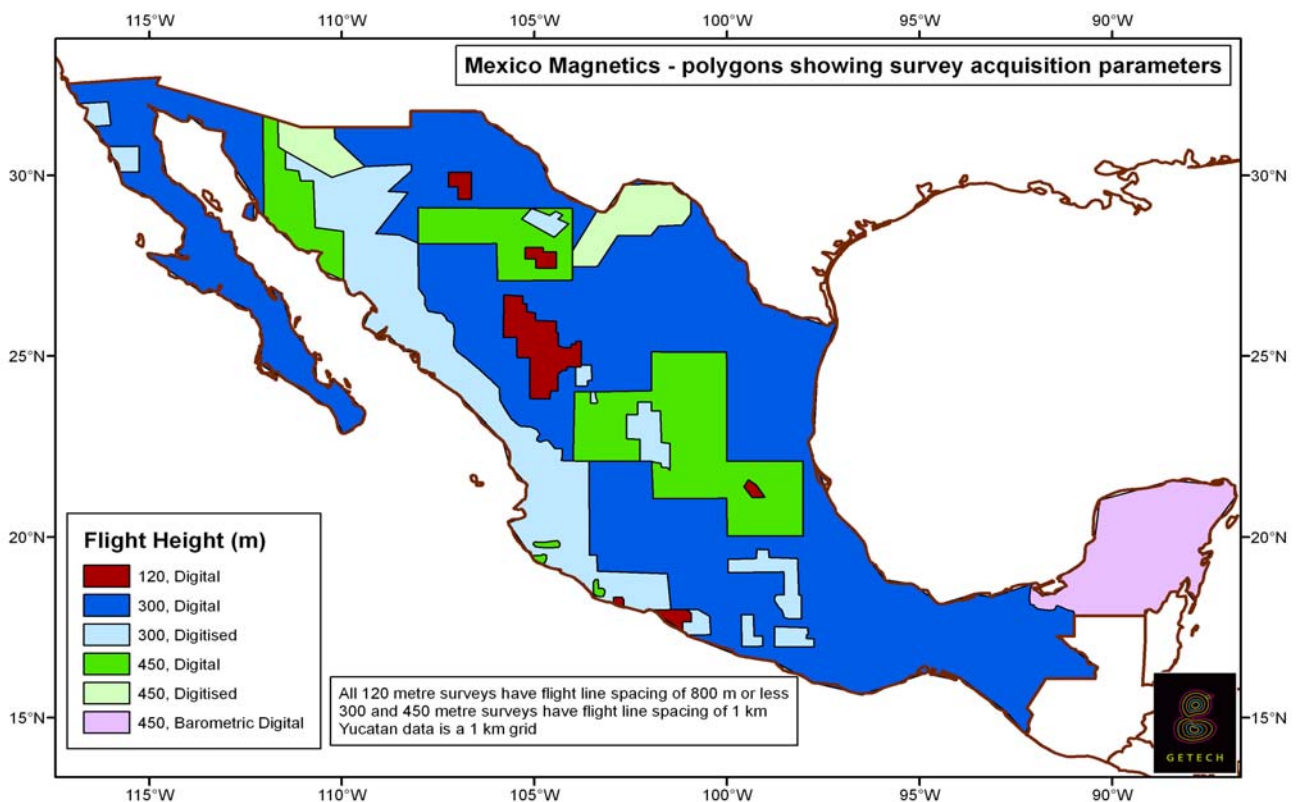

Gravity data are also available for onshore and offshore Mexico – please ask for details.

Magnetic Data Products

200m grids of:

- Total Magnetic field
- Reduced to Pole of TMI
- 1st vertical derivative of RTP
- Total horizontal derivative RTP
- Analytic Signal

All data can be released immediately and are subject to GETECH's standard Licence Agreement.

Please contact either Ian Somerton in Leeds (iws@getech.com) or Graham Gifford in Houston (gng@getech.com) for more information.
